

Useful Shortcuts

SHORTCUT	DESCRIPTION
Alt + 1 ... Alt + 9	Executes the first nine commands in the user-defined Quick Access Toolbar. In this way you can define shortcuts for your most often used commands.
Alt + F4	Closes all open documents and exits VirtualLab Fusion
Ctrl + F4	Closes the current document
Ctrl + L	Shortcut for a new Optical Setup
Ctrl + M	Shortcut for a new C# module
Ctrl + O	Opens a file in one of VirtualLab Fusion's document formats
Ctrl + S	Saves the currently active document
Ctrl + Shift + S	Asks for a file name and saves the document to this file
Ctrl + 1 ... Ctrl + 0	Opens the most recently opened documents. Ctrl +1 opens the latest used document, + 2 the second latest and so on.
F1	Opens the VirtualLab Fusion Manual with context-sensitive help
F2	Renames the current document
F3	Converts a document window into a data array or a harmonic field
F4	Toggles the Property Browser on and off
F5	For Optical Setups, Parameter Runs and alike: Starts the simulation For Modules: Compiles and then executes the source code
Shift + F5	Stops the simulation / the execution of the code
F6	For Modules and snippets: Compiles the implemented source code and shows the resulting compiler errors and warnings both within the source code editor and in the Messages panel of the main window.
