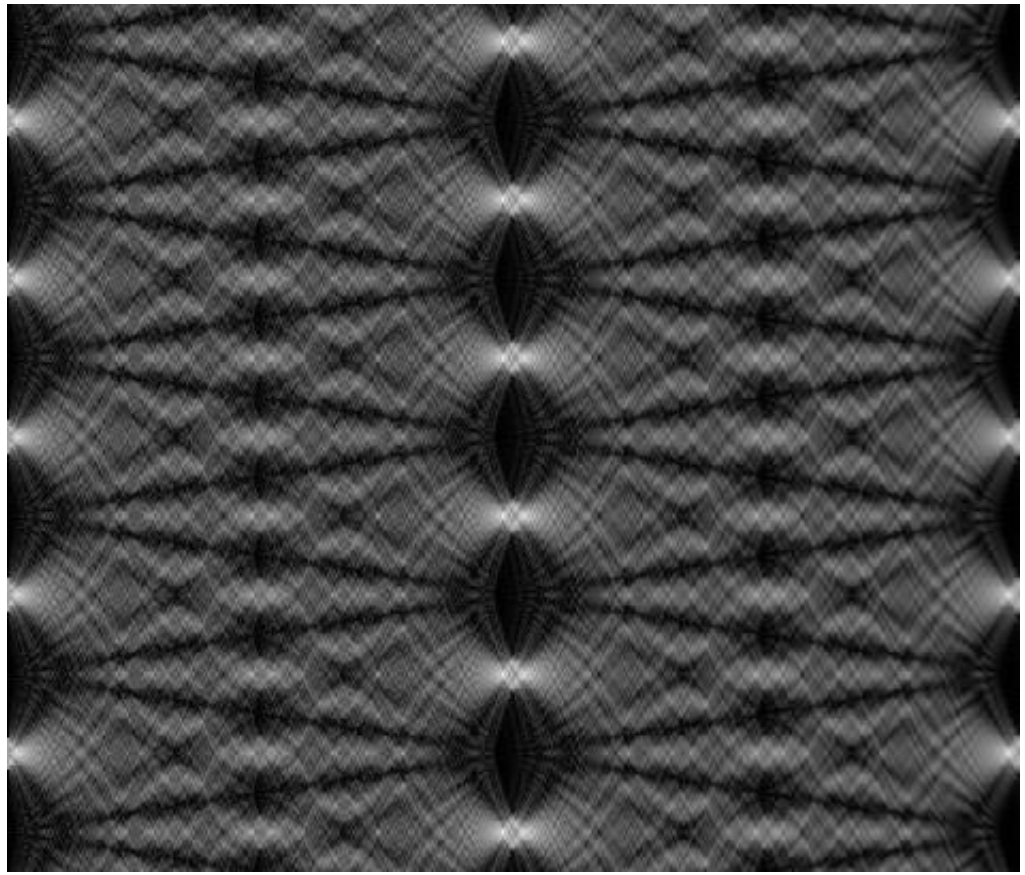
Modeling of the Talbot Effect

Abstract

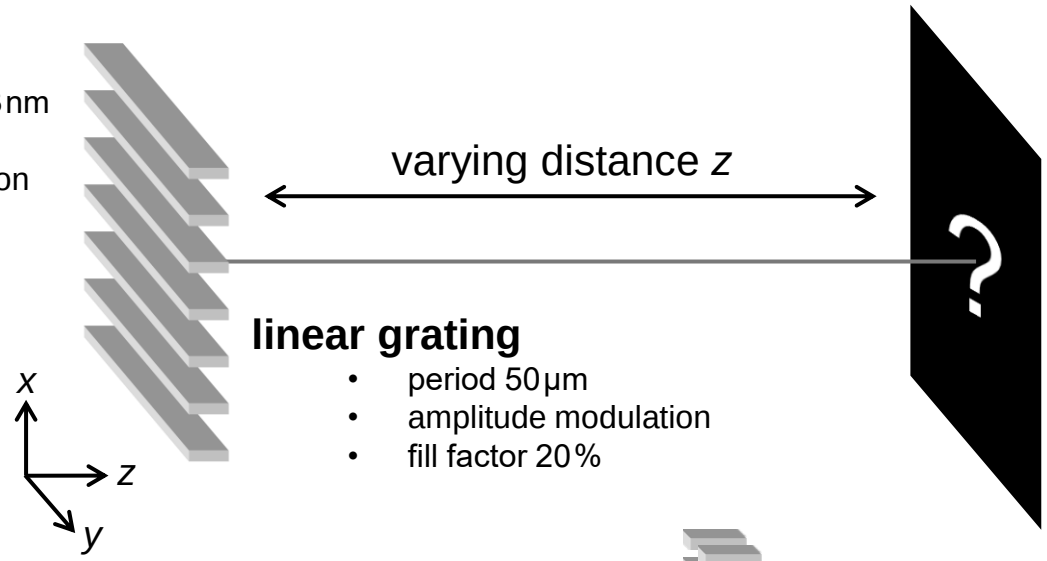


The Talbot effect is a well-known near-field diffraction effect. When a periodic structure (e.g. a grating) is illuminated by collimated light, at certain regular intervals behind the grating it is possible to observe its reconstructed image. The specific distance that separates these planes is called the Talbot distance, after Henry Fox Talbot, who firstly observed this effect in 1836. In this example we demonstrate the modeling of the Talbot effect (also recreating the Talbot carpet) with the fast physical optics software VirtualLab Fusion.

Modeling Task

input field

- plane wave
- wavelength 633 nm
- diameter 2 mm
- linear polarization



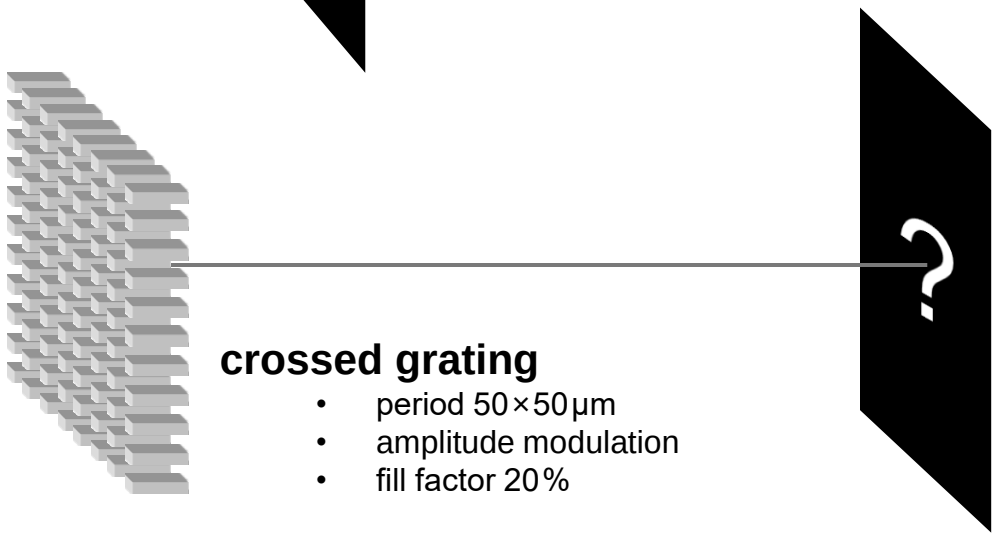
linear grating

- period 50 µm
- amplitude modulation
- fill factor 20 %

What does the transmitted field behind the grating look like at different distances?

input field

- plane wave
- wavelength 633 nm
- diameter 2 mm
- linear polarization



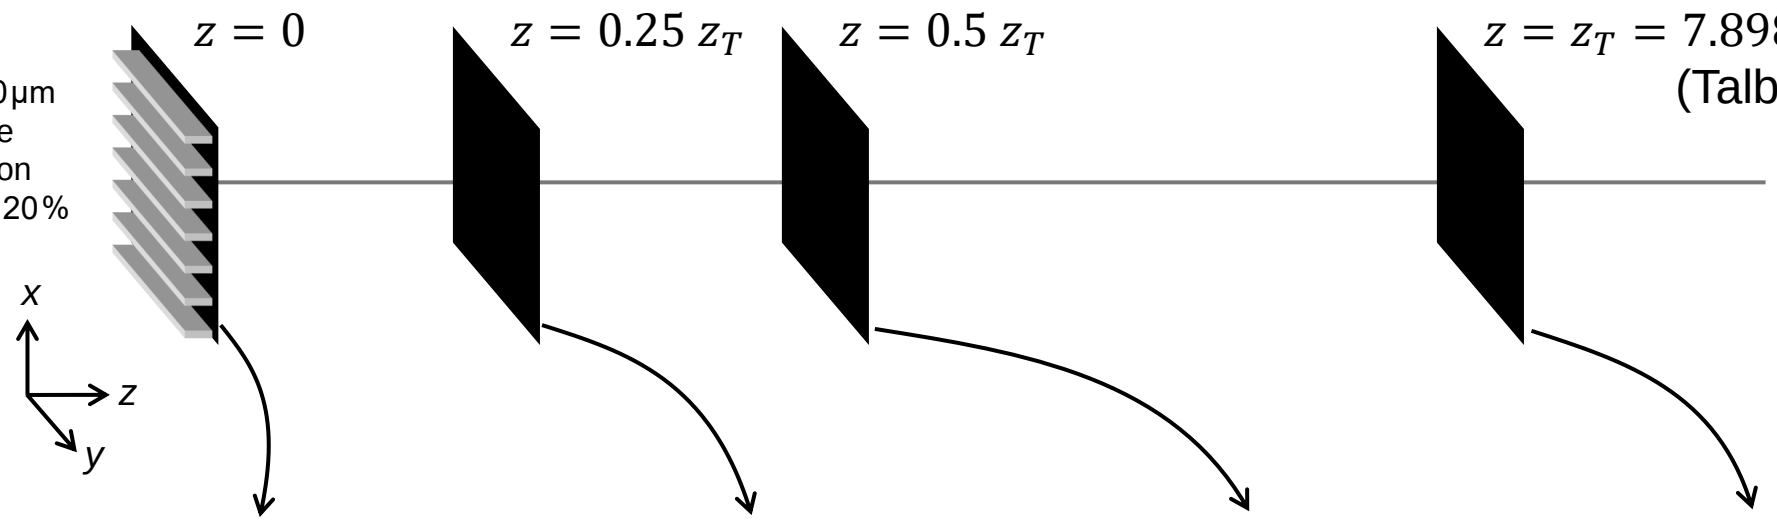
crossed grating

- period 50×50 µm
- amplitude modulation
- fill factor 20 %

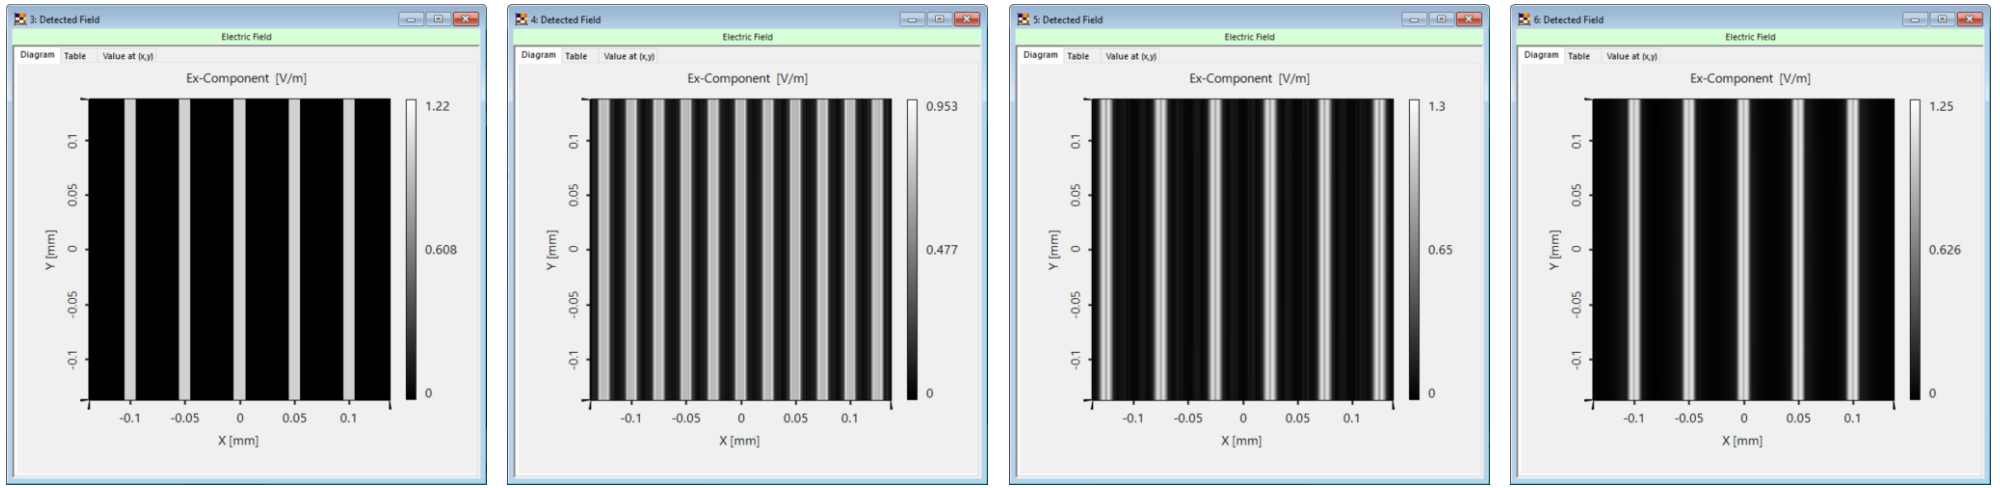
Field behind Linear Grating

linear grating

- period 50 µm
- amplitude modulation
- fill factor 20 %



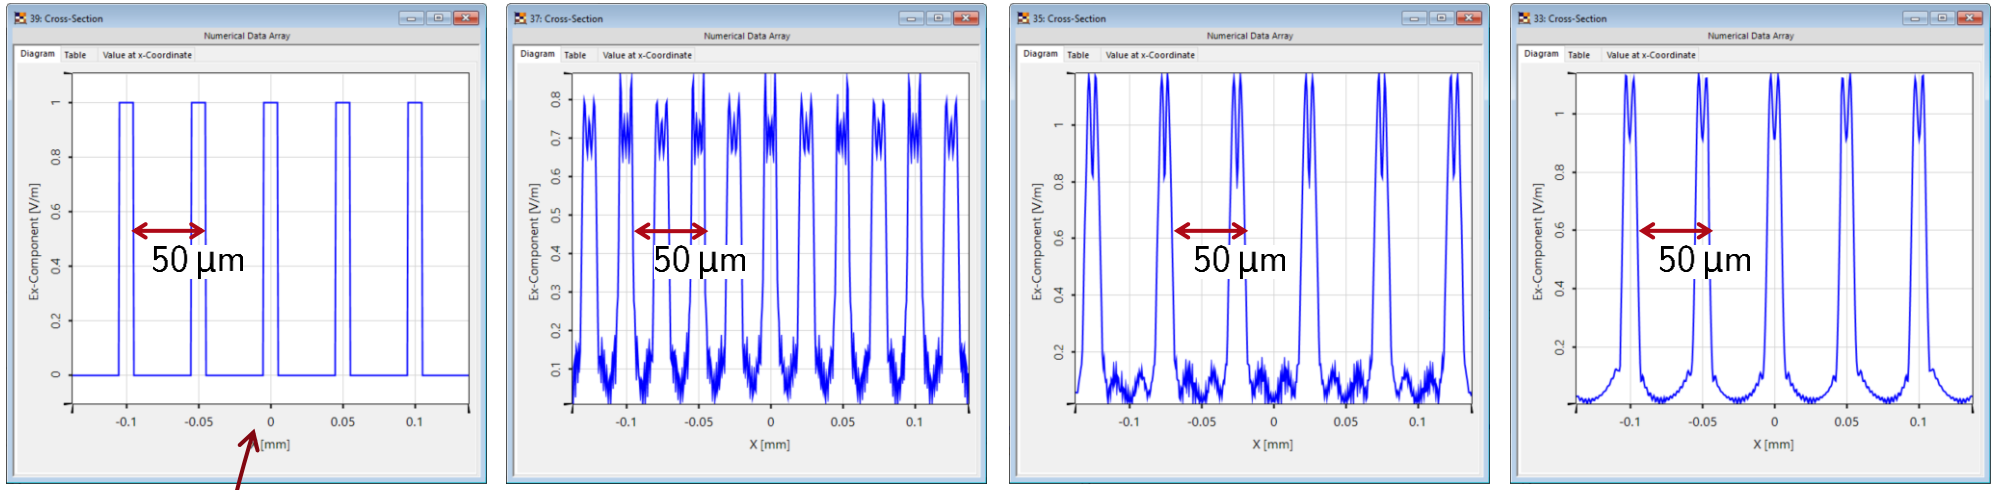
field amplitude in x-y- plane



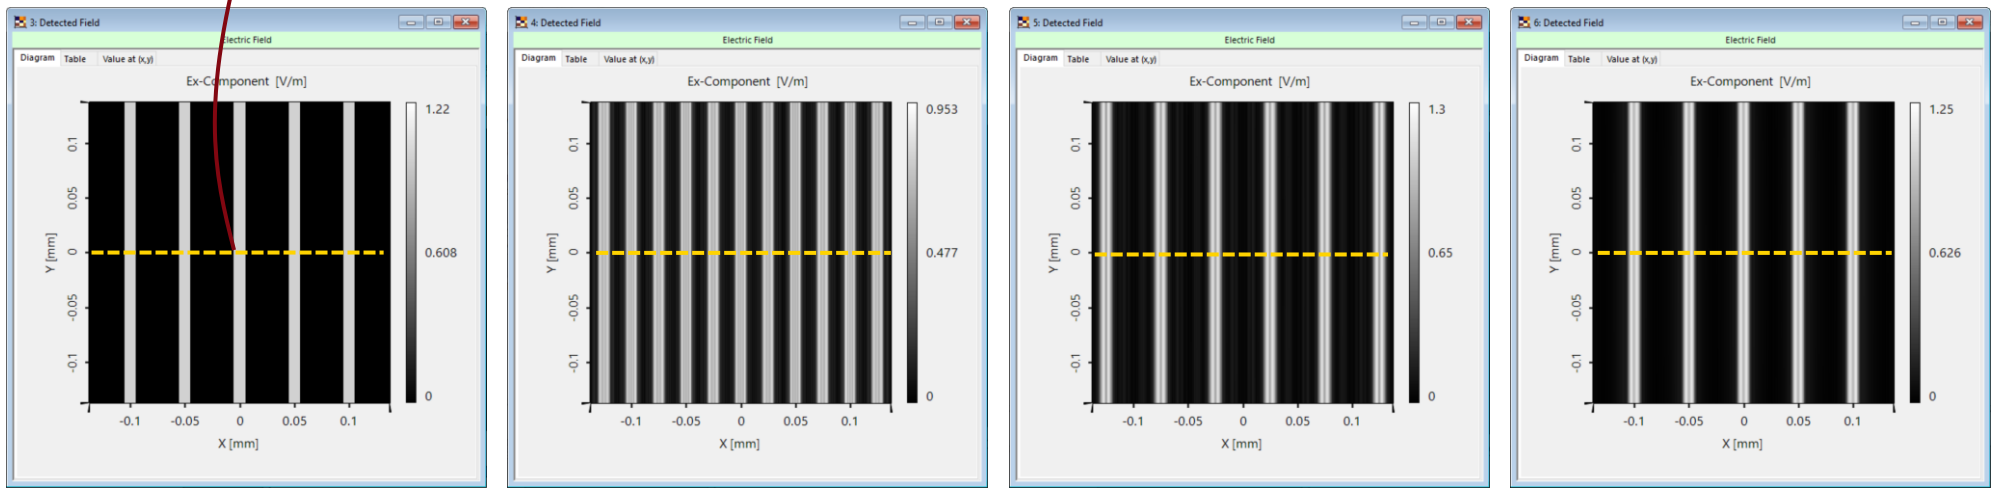
$z = 0$ $z = 0.25\ z_T$ $z = 0.5\ z_T$ $z = z_T$

Field behind Linear Grating

field amplitude along x-direction



field amplitude in x-y- plane

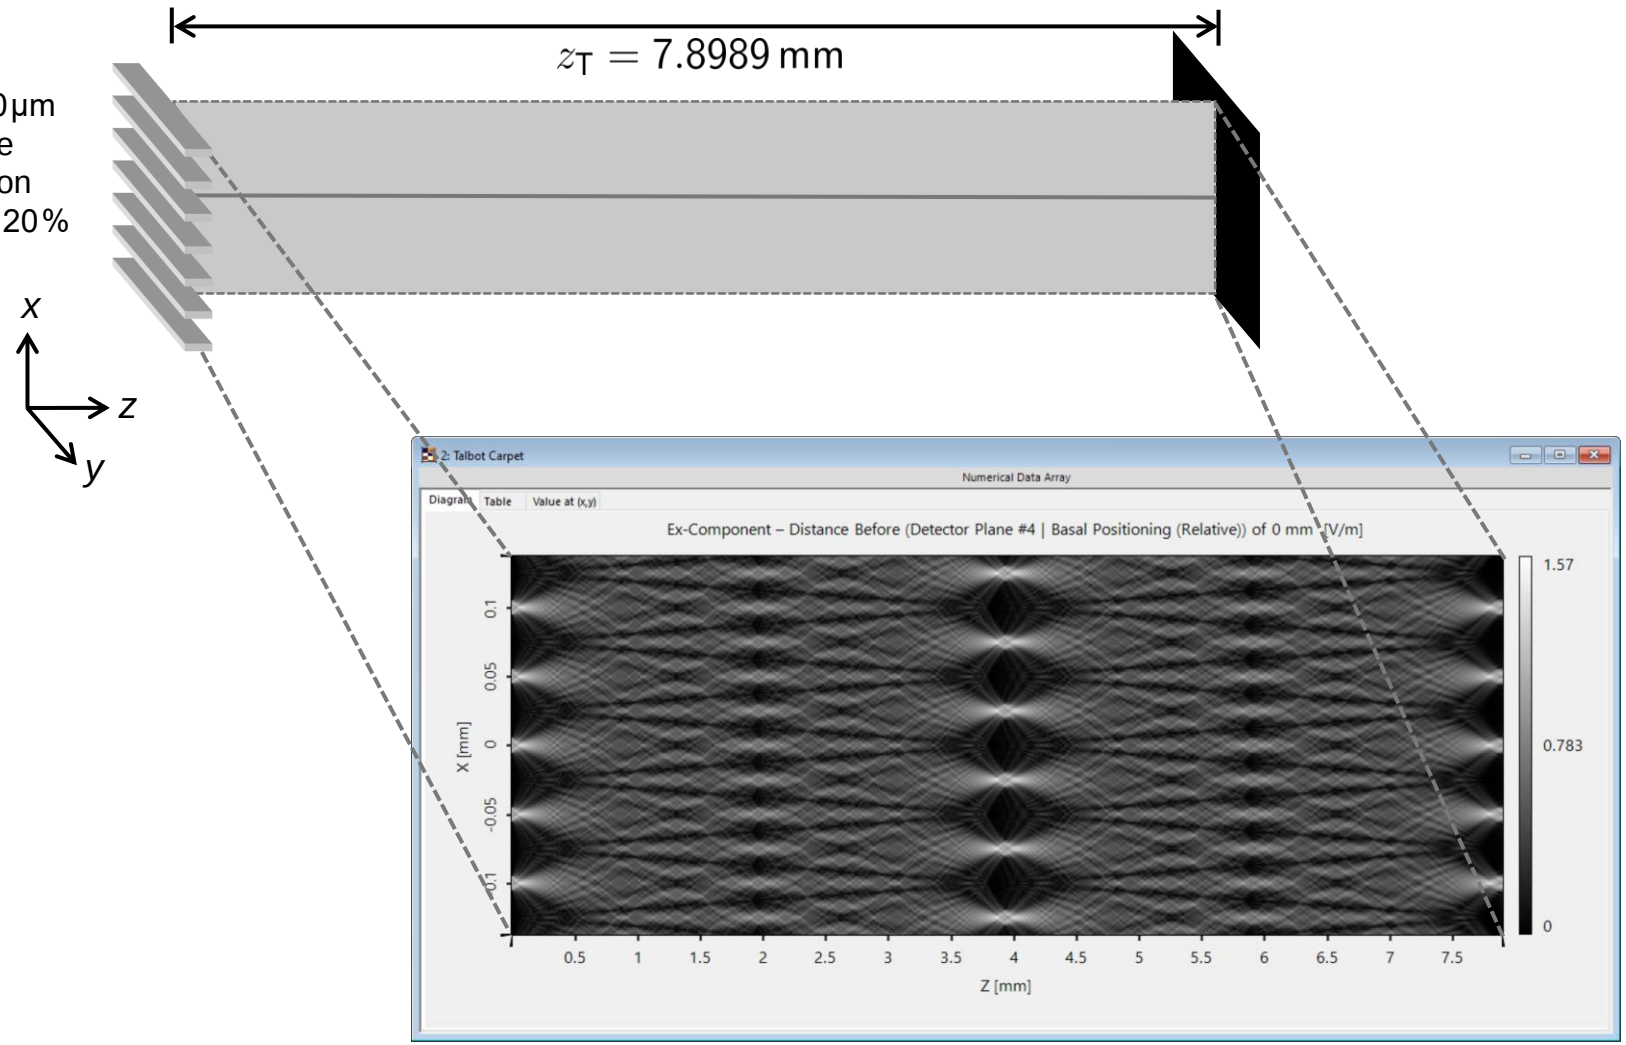


$z = 0$ $z = 0.25\ z_T$ $z = 0.5\ z_T$ $z = z_T$

Field behind Linear Grating – Talbot Carpet

linear grating

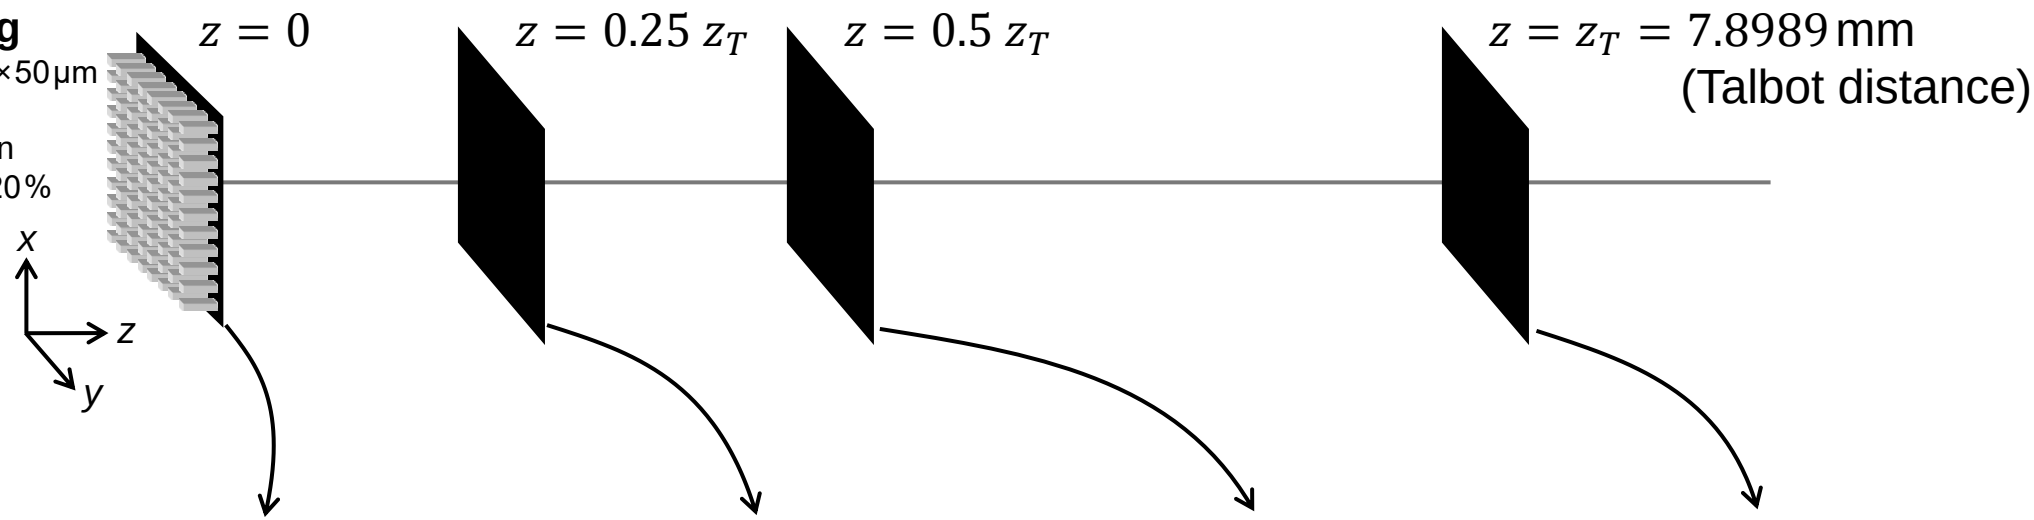
- period 50 µm
- amplitude modulation
- fill factor 20 %



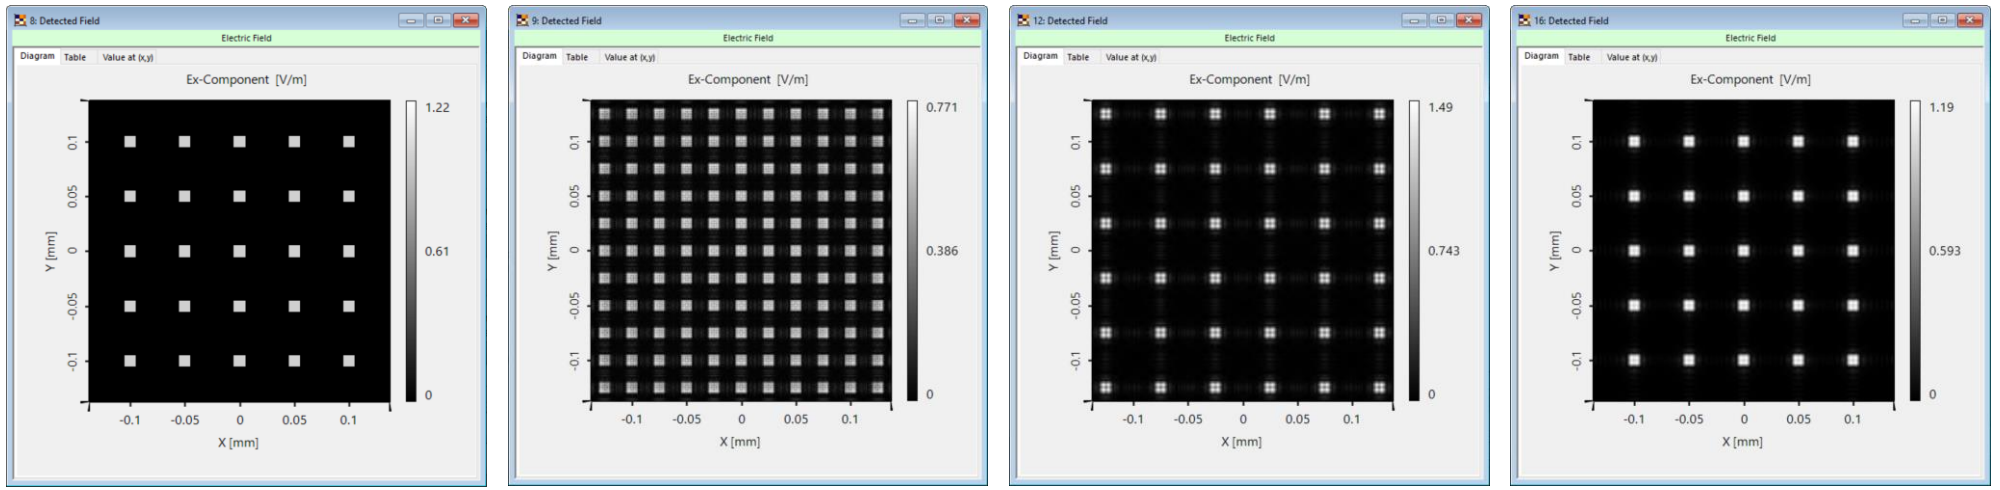
Field behind Crossed Grating

crossed grating

- period 50×50 µm
- amplitude modulation
- fill factor 20 %



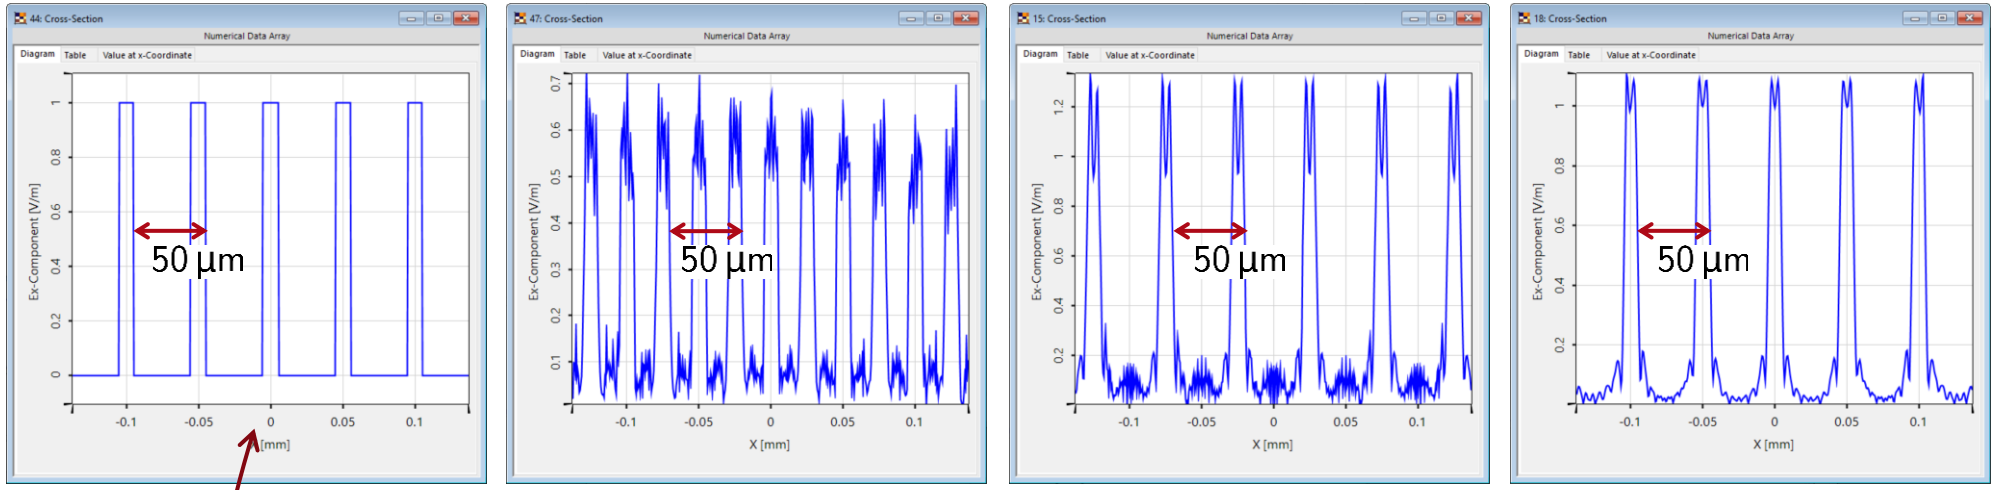
field amplitude in x-y- plane



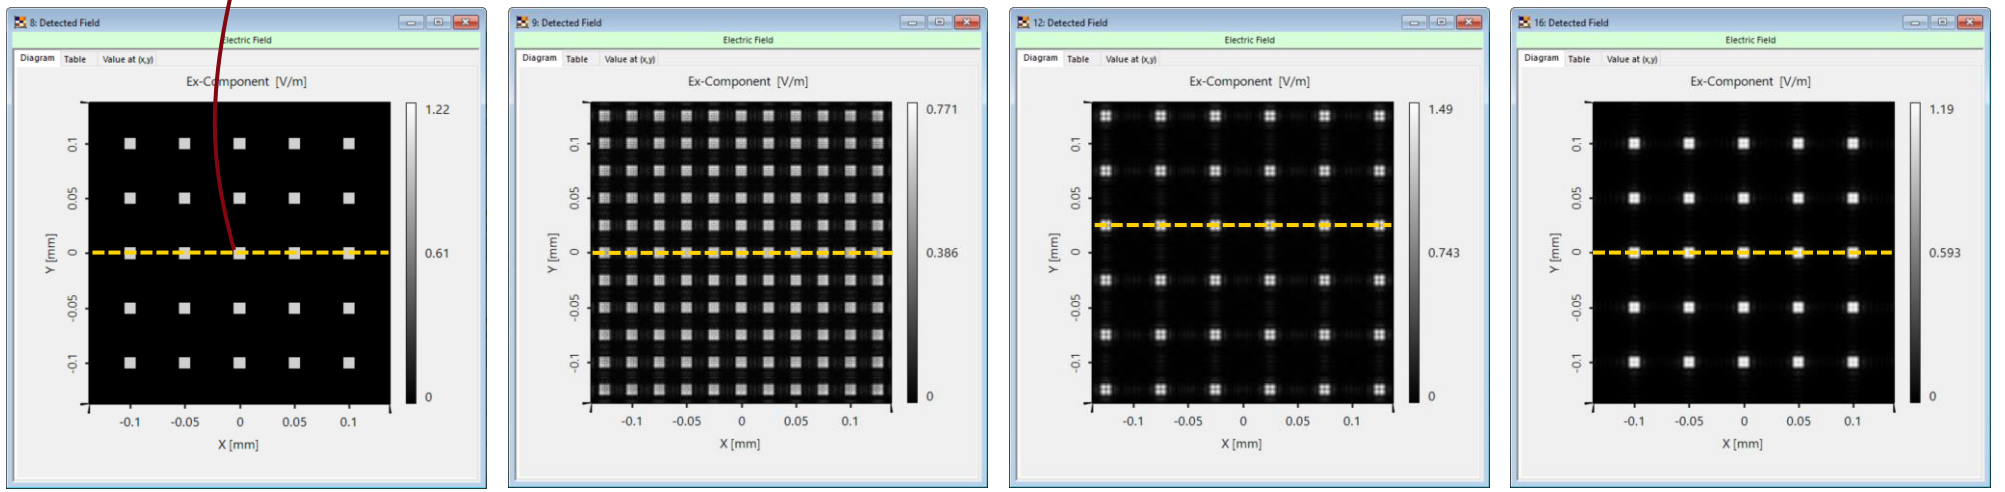
$z = 0$ $z = 0.25\ z_T$ $z = 0.5\ z_T$ $z = z_T$

Field behind Crossed Grating

field amplitude along x-direction



field amplitude in x-y- plane



$z = 0$ $z = 0.25\ z_T$ $z = 0.5\ z_T$ $z = z_T$

Document Information

title	Modeling of the Talbot Effect
document code	MISC.0078
document version	1.1
software edition	VirtualLab Fusion Basic
software version	2021.1 (Build 1.180)
category	Application Use Case
